

- 387 Laminosioptes cysticola in the subcutis of a nature female chicken from Wells, Minnesota
- 888 Viral Encephalomyocarditis, porcine
- 889 Gastrophilus spp. equine - also A ~~neuro~~ode
- 890 Capillaria hepatica, liver, Rhesus
- 891 Capillaria hepatica, liver, Rhesus, PAS
- 892 Collyriclum faba, subcutis, avian
- 893 Collyriclum faba, subcutis, avian, PAS
- 894 Cutaneous Strongyloidosis, ovine
- 895 Cysticercus bovis, myocardium, bovine, with Sarcocystis spp cyst.
- 896 Cysticercus cellulosae, myocardium, swine.
- 897 Cysticercus ovis, skeletal muscle, ovine, with Sarcocystis spp. cysts.
- 898 Hymenolysis microstoma, liver, rabbit, with associated fibrosarcoma
- 899 Dicrocoelium dendriticum, liver, bovine, with biliary hyerplasia
- 900 Notoedres cati, ear, cat.
- 901 Esophagostomum spp., large intestine, Rhesus.
- 902 Filaroides osleri, trachea, canine (wolf)
- 903 Gongylonema spp., esophagus, host species unknown, (monkey)
- 904 Linguatula serrata, lymph node, bovine.
- 905 Metastrongylus sp., lung, swine
- 906 Multiceps seriales, eyelid, baboon (Ctelada)
- 907 Oesophagostomum spp. liver, Rhesus
- 908 Onchocerca reticulata, ligamentum nuchae, equine.
- 909 Paragonimus rudis, skunk
- 910 Cysticercus fasciolaris, liver, wild rat.
- 911 Trichinella spiralis, adult, intestine, rat.
- 912 Trichuris anatrichosoma, nasal sinus, Cynomologous monkey.
- 913 Schistosomas spp. and Nosema cunicula, liver and kidney, Swiss mouse.

- 914 Spirocerca lupi, pharynx, canine.
- 915 Schistosoma mansoni, liver, hamster.
- 916 Strongylo ides spp., Small intestine, monkey, with intussusception
- 917 Cnemidocoptes mutans, leg, avian.
- 918 Schistosomas spp., lung, species unknown
- 919 Schistosoma mansoni, intestine, hamster
- 920 Cysticercus fasciolaris liver, rat, with associated fibrosarcoma.
- 921 Dipetalonema spp., liver, Gorilla (Male, baby)
- 922 Anoplocephala magna, Earamphistom cervi, Parascarus equorum,
Arthropod Gasterophilis section of adults
- 923 Paragonimus kellicotti, lung, cat.
- 924 Paramphastoma spp., rumen, gnu
- 925 Hymenolepsia nana, intestine, rat.
- 926 Cysticercus cellullosae, liver, canine.
- 927 Onchocerca spp. (microfilaria), dermis, horse
- 928 Equine Viral Abortion (Rhinopneumonitis), lung, liver, equine (Inclusion bodies in liver and in bronchiolar epithelium between dots)
- 929 Renal Cysts, Kidney monkey.
- 930 Eosphogostomum spp., liver, rhesus
- 931 Carotene Pigment, liver bovine
- 932 Siderotic nodules, splenic capsule, canine.
- 933 Anthracosilieosis, lung, canine
- 934 Melanosis, Liver, sheep
- 935 Melanosis, myocardium, sheep
- 936 Melanosis, kidney, sheep
- 937 Calcification, lung, Guinea pig.
- 938 Calcification, stomach, Guinea Pig.
- 939 Calcification, kidney, guinea pig.
- 940 Ossification, lung, old bovine.
- 941 Calcification, metastatic, heart, Mouse (DBA/2J)

- 969 Rhabdomyomatosis, heart, guinea pig.
- 970 Chagas' Disease (leishmanial forms), heart, human.
- 971 Adenocarcinoma, gall bladder, I^o, bovine.
- 972 Telangiectasis, liver, aged bovine.
- 973 Toxic hepatitis, Sodium Caparsolate, liver, CAnine.
- 974 Toxic hepatitis, trefoil (Trifolium spp.), liver, sheep,
- 975 Cystic mucinous hyperplasia, gall bladder, dog.
- 976 Mucoid enteritis, small intestine, rabbit.
- 977 Johne's Disease & Actinobacillosis, intestine & lymph node, bovine.
- 978 Johne's Disease & Actinobacillosis, intestine & lymph node, bovine.
- 979 Actinomyces bovis, lung, Goat.
- 980 Actinomyces bovis, lung, Goat.
- 981 Actinomyces bovis, lung, Goat.
- 982 Toxic hepatitis, aflatoxin, brazilian peanut, liver, calf.
- 983 Mycobacterium leprae (?) spleen, rodent.
- 984 Mycotic granuloma, larynx, bear.
- 985 Phycomycosis, intestine, dog.
- 986 Phycomycosis, intestine, dog GMS
- 987 Hemosiderosis, small intestine, cow.
- 988 Mucinous degeneration of myocardium, heart, equine.
- 989 Rhinosporidiosis, nasal cavity, equine.
- 990 Saprophytic growth of fungi, skin & Breast muscle, chicken,
(Resembles maduromycosis slightly)
- 991 Caseous hepatitis (abscesses), liver, bovine, Spheropherous necrophenous.
- 992-993 Leimyosarcoma (Rhabdomyosarcoma?) Wing - Parakeet.
- 994 Mammary Adenofibroma transplanted to kidney - Rat.
- 995-996 Adrenal Cortical Adenoma, hyalin scarring of renal corpuscles - Canine

- 997 Chromophobe Adenoma - Pituitary - Rat.
- 998 Granulosa cell tumor - ovary - Canine.
- 999 Hemangioendothelioma, liver - Avian
- 1000 Interstitial Cell tumor, testicle, rat.
- 1001 Leiomyoma - uterus (mass in hernia) Canine.
- 1002 Liposarcoma - and "Old Rat Kidney" Kidney - Rat.
- 1003 Malignant Melanoma, skin of cheek, dog.
- 1004 Meningioma psammontores, brain - Human.
- 1005 Adenoma - Nasal - Ovine
- 1006 -
- 1007 Plasma Cell Tumor - salivary gland, liver, spleen - Mouse.
- 1008 Salivary, Gland Adenoma - Mouse.
- 1009 Perianal Gland Adenoma - Canine N-Female 4 yr.
- 1010 Spindle Cell Sarcoma - (unstated) skin - pigeon. / liposarcoma - bird
- 1011 Warts - skin - penguin fox - Michael
- 1012 Adamantinoma - upper gingiva - Rabbit.
- 1013 Mast Cell tumor, liver, Bovine
- 1014 -
- 1015 Mesenchymal tumor - Avian
- 1016 Canine - Squamous Metaplasia of Renal Tubules.
- 1017 Acinar cell Adenoma - Pancreas Dog.
- 1018 Adenocarcinoma - Large intestine - Dog
- 1019 Leiomyoma and Cystic Genital Duct - Parakeet.
- 1020 Undifferentiated Sarcoma - Nasal Region - Dog.
- 1021 - } Hepatic Cell carcinoma, Metastatic, Cat.
1022 - }

- 1023 Chorio - carcinoma, metastatic to lung, Rhesus.
- 1024 Reticulum Cell Sarcoma, kidney, liver - Mouse.
- 1025 Adrenal Cortical Carcinoma, Dog.
- 1026 Osteochondroma (osteocartilaginous exostosis) rib, cat.
- 1027 Cystadenoma, avarian, chicken.
- 1028 Adenocarcinoma, kidney origin, liver, python,
- 1029 Adenocarcinoma, cerminous gland, Cat,
- 1030 Undifferentiated R-E Sarcoma, Rat
- 1031 Malignant hepatoma, Canine.
- 1032 Myelocytomatosis, eye, Ghostley pearl chicken.
- 1033 Myoepithelial neoplasm (carcinoma?) lymph node mouse,
- 1034 Granulosa cell tumor (carcinoma?) Rhesus,
- 1035 Renal Carcinoma (Lucke's), Frog.
- 1036 Transitional cell papilloma, Urinary Bladder,
- 1037-
- 1038 Coxsackie type A Virus - Suckling Mouse Disease, Skeletal Muscle.
- 1039 Experimental Foot and Mouth Disease - interdigital space - Bovine
- 1040 Hog Cholera - Lymph Node - Porcine.
- 1041 PPLO Pneumonia - Lung - Bovine.
- 1042 Salivary Gland Virus - Guinea Pig.
- 1043 Salmon Poisoning Lymph Node and Colon - Canine.
- 1044 Salmon Poisoning Lymph Node and Colon - Canine,
- 1045 WEE (experimental) - lymph node - equine.
- 1046 Yaba Virus - tumore in muscle - Rhesus.
- 1047 Epidemic diarrhea of Infant Mice - Stomach and Intestine.
- 1048 Marek's Disease - skin - Chicken.
- 1049 Transmissible fibropapilloma - penis bovine,
- 1050 Acute Bronchial Pneumonia - Mouse Pneumonia Virus - Mouse.

- 1051 Inclusion Body Rhinitis - Turbinates - Swine.
- 1052 Chronic interstitial pneumonitis, plutonium, lung, Canine.
- 1053 } Acute Meningo-encephalitis, Radiation, Burro.
- 1054 }
- 1055-
- 1056 Blackleg, Muscle, Cl. Chauvri, Bovine.
- 1057 Spermatic Granuloma, Brucella abortus epididymus, Bovine.
- 1058 Lymphadenitis, Streptococcal, bovine.
- 1059 Clay - Pigeon (Pitch) Poisoning, Liver, Swine.
- 1060 Aflotoxin poisoning, liver, duck.
- 1061 Senecio poisoning, liver, rat.
- 1062 Thallium poisoning, skin, dog.
- 1063 Arsenic, chronic, renal change, kidney, canine.
- 1064 Lead residue, muscle, porcine.
- 1065 Toxic nephrosis, copper poisoning, kidney, ovine.
- 1066 Coagulation necrosis, G-I tract, HCl, laboratory animal.
- 1067 Pyometra, cystic endometrium, uterus, canine.
- 1068 Granulomatous orchitis, calcifying, bovine.
- 1069 Testicular atrophy, rat.
- 1070 Fibrous and Squamous Metaplasia of Prostate, canine.
- 1071 Follicular Cyst, ovary, canine .
- 1072 Chronic Prostatitis, canine. This is a carcinoma ^{McCull} Hall.
- 1073 Normal placentome, uterus, guinea pig.
- 1074 Prostatic Hyperplasia, cystic, canine.
- 1075 Cystic endometritis, uterus, canine.
- 1076 Muscular Dystrophy, azoturia, equine.
- 1077 Hyperplasia, adrenal, canine
- 1078 Amebiasis, (Entameba invadens), necrosis, intestine, Indian Rat, Snake,

- 1079 Chagas' Disease, T. cruzi, myocardium, mouse.
- 1080 Coccidiosis, E. parva, mesenteric lymph nodes, goat.
- 1081-
- 1082 Adiaspiromycosis, (Haplomycosis, Emmonsia), granuloma, omentum, experim.
monkey.
- 1083 Coccidiosis, (E. bovis, E. abumensis), colon, bovine.
- 1084 Hepatozoon belfouri, liver, jerbon
- 1085 Malaria, Plasmodium berghei, blood smear, mouse.
- 1086 Steatitis, subcutis, Equine
- 1087 Chronic steatitis, mesenteric fat, canine.
- 1088-
- 1089 Scurvy, Long bones and teeth, Guinea Pig.
- 1090 Scurvy, sub-periosteal hemorrhage, monkey.
- 1091-
- 1092 Lipid Stomage Disease, Liver, spleen, bovine,
- 1093 Bronchial cyst, canine.
- 1094 Osseus metaplasia, healed wound, small intestine, canine.
- 1095-
- 1096 Testicular Hypoplasia, bovine.
- 1097 Hyperplasia, gingival epithelium, African mustache monkey.
- 1098 Congenital retinopathy with cataract, species unknown.
- 1099 Salivary cyst, neck, canine.
- 1100[←] testick, maybe Newtren, prolif. infiltrat. 6/6
- 1101-
1102 Hydronephrosis, kidney, feline.
- 1103- Suppurative nephritis?
- 1104 Mucinous metaplasia, renal pelvis, suppurative nephritis, kidney,
porcine.
- 1105 Hydropic change, kidney, canine.
- 1106 Colloid cyst, pars intermedia, pituitary, canine. *Nemalode*
- 1107 Goiter, thyroid, ovine.
- 1108 Lymphocytic thyroiditis, monkey.

- 1079 Chagas' Disease, T. cruzi, myocardium, mouse.
- 1080 Coccidiosis, E. parva, mesenteric lymph nodes, goat.
- 1081-
- 1082 Adiaspiromycosis, (Haplomycosis, Emmonsia), granuloma, omentum, experiment monkey.
- 1083 Coccidiosis, (E. bovis, E. abumensis), colon, bovine,
- 1084 Hepatozoon belfouri, liver, jerbon
- 1085 Malaria, Plasmodium berghei, blood smear, mouse,
- 1086 Steatitis, subcutis, Equine
- 1087 Chronic steatitis, mesenteric fat, canine,
- 1088-
- 1089 Scurvy, Long bones and teeth, Guinea Pig.
- 1090 Scurvy, sub-periosteal hemorrhage, monkey,
- 1091-
- 1092 Lipid Storage Disease, Liver, spleen, bovine,
- 1093 Bronchial cyst, canine.
- 1094 Osseus metaplasia, healed wound, small intestine, canine.
- 1095-
- 1096 Testicular Hypoplasia, bovine.
- 1097 Hyperplasia, gingival epithelium, African mustache monkey.
- 1098 Congenital retinopathy with cataract, species unknown,
- 1099 Salivary cyst, neck, canine.
- 1100 ~~Testicle, male Newborn, prolif. intestinalis.~~
- 1101-~~Testicle, male Newborn, prolif. intestinalis.~~
- 1102 Hydronephrosis, kidney, feline.
- 1103 Suppurative nephritis?
- 1104 Mucinous metaplasia, renal pelvis, suppurative nephritis, kidney, porcine.
- 1105 Hydropic change, kidney, canine.
- 1106 Colloid cyst, pars intermedia, pituitary, canine. *Nemo Lode*
- 1107 Goiter, thyroid, ovine.
- 1108 Lymphocytic thyroiditis, monkey.

- 1079 Chagas' Disease, T. cruzi, myocardium, mouse.
- 1080 Coccidiosis, E. parva, mesenteric lymph nodes, goat.
- 1081-
- 1082 Adiaspiromycosis, (Haplomycosis, Emmonsia), granuloma, omentum, experiment monkey.
- 1083 Coccidiosis, (E. bovis, E. abumensis), colon, bovine.
- 1084 Hepatozoon belfouri, liver, jerbon
- 1085 Malaria, Plasmodium berghei, blood smear, mouse.
- 1086 Steatitis, subcutis, Equine
- 1087 Chronic steatitis, mesenteric fat, canine.
- 1088-
- 1089 Scurvy, Long bones and teeth, Guinea Pig.
- 1090 Scurvy, sub-periosteal hemorrhage, monkey.
- 1091-
- 1092 Lipid Storage Disease, Liver, spleen, bovine.
- 1093 Bronchial cyst, canine.
- 1094 Osseus metaplasia, healed wound, small intestine, canine.
- 1095-
- 1096 Testicular Hypoplasia, bovine.
- 1097 Hyperplasia, gingival epithelium, African mustache monkey.
- 1098 Congenital retinopathy with cataract, species unknown.
- 1099 Salivary cyst, neck, canine.

Young Beagle fed lab chow and 3 doses of _____.

(6-7) USA Med Rsch Lab 1789

Specimen from an experimentally inoculated adult Swiss male mouse.

(8) 64N 726-T3 - Lamb

Owner reports that he recently brought his flock down from the mountains to two near-by fields. They are on Trefoil pastures. The owner says that he has lost 8 or 10 and has several sick lambs with drooping ears, discharge from the nose and a poor appetite. Lambs from both fields are involved. All animals were sheared but they have received no medical treatment of any kind recently.

1110933 - Nodular tumor, 1x1½x3 cm., removed from leg of 3-year-old canine.

Reviewed with diagnosis of mixed cell tumor of skin appendage.

1137694 - 3-4 month-old pig.

1141513 - 1½-year-old animal.

1. Diagnosis:

2. Species:

63P3535 - Fowl Pox - Six white leghorns 32 weeks old were brought to the diagnostic laboratory because they had stopped laying and had lost weight.

At necropsy, wart-like growths were noted on the comb, face and/or wattles of 4 of the 6 birds.

Frozen tissue was saved and latter used to transmissible the disease experimentally to other chickens.

7764

This section is from a mass removed from the region of the external nares of a four-year-old gelding. The mass measured $2 \times 2\frac{1}{2}$ cm and was firm to palpation. The growth of the mass was quite rapid from the time it was first noted by the owner until removed approximately 2½ months later.

P282----65

Eight-week-old female chicken. Enlargement of feather follicles was the only lesion seen at necropsy.

1052404

Tissue from a dog of unknown sex, breed and age. Dyspnea present for 2-3 weeks. Examination of radiographs revealed large dense masses in the dorsal aspect of the thoracic cavity.

2 December 1964

- (2) 1134043 - 4-month-old pup, breed withheld, bilateral condition.
- (2) 405-64 - Rhesus monkey.
- (2) 63P939 - A five-year-old gelding arrived at the C.S.U. clinic in the fall of 1963 with a history of having lost weight on pasture during the summer and of recently becoming weak and slightly icteric. This animal had had numerous owners. Came originally from California, spent 2-3 years in New Mexico, and presently resided in Colorado. The present owner reported that he "had trouble keeping the blood count up in May and June. In July, the horse was ill." Other horses of this owner had shown "similar problems" and one had died during the past year. At admission this horse had a temperature of 102°F. Laboratory results on October 19 were as follows: PCV-13%; WBC 3, 150; Protein 6.38 Gm; SGOT 790; cholesterol 211 mg % alkaline phosphatase 12 Bodansky units. On November 4, the animal was killed and necropsied.

Diagnoses & References

AFIP #581156: German shepherd dog 3½ months of age. Male. Poor appetite, vomiting, weakness and restlessness for 3 days prior to admission to hospital. On arrival, semi-comatose with subnormal temperature and blanched mucosa. Died a few hours later.

G-11-64-24: Incidental finding in a squirrel monkey.

MI-9082: 16 shoats (5-6 weeks old) showed brown-yellow discoloration in the left ham area. The discoloration was not obvious through the unbroken skin. The involved area was about 3" in diameter and sometimes extended down to the hock and flank region. Discoloration extended subcutaneously and down the intermuscular septa of semitendinosus muscle. Confirmative test?

Diagnoses & Pathologies

AHIP #521156 - section of midbrain

Infectious Canine Hepatitis - "hemorrhagic encephalopathy"
~~marked~~ hemorrhage & IN inclusions within
endothelial cells also endothelial swelling & changes

Necropsy Findings

Liver - yellowish & slightly swollen

Tonsils - enlarged & reddened

Brain stem - hemorrhage

Lateral ventricles - lumen filled

Ref Smith & Jones - p 324 photos of this case
(2nd Ed)

6-11-64-24

Acanthocephalosis -- Prosthenorhynchus elegans in a
section of colon

Commonly seen in squirrel monkey esp. in large intestine & region of
ileocecal valve (barrier) also seen in other monkeys but less
commonly.

Ref - Ruckl - Diseases of Primates

M1 9082

Residuum of Fe-dextran (Fe pigment) within the sub-q
tissue. Actually Fe injection to prevent baby pig anemia in sheets.

Lesions (of Fe pigment deposition) is not usually seen in
muscle, the Fe evidently does not remain in muscle tissue.

organisms + sprophyltes visible.

(11)

HISTORIES FOR WEDNESDAY SLIDE CONFERENCE
27 January 1965

- 64P430: In a registered Hereford herd of approximately 50 cow-calf pairs near Sedalia, Colorado, two calves were found dead and three others sick on June 5. These animals were running on 200 acres of pasture that contained scrub oak. The pasture was short until recent rains promoted new growth. Signs in the sick animals included tachycardia, polydipsia, polyuria, weakness and staggering. One of the sick calves, a four-month-old female, was euthanized for necropsy on June 6.
- I-119: Mature female rhesus monkey, detectable illness of eight days, terminated by euthanasia. No specific symptoms noted other than lassitude, reluctance to eat and in the later stages infrequent vomiting with tender abdomen or palpation.
- WBC values - moderate / L gm (24,000) leukocytosis with definite shift to left and decreased nemaocrit values.
- Urine (sterile catheter): 1+ albumin, 2+ sugar with few epithelial cells, many bacteria, triple phosphate crystals, culture questionable.
BUN - 281 mg.%, blood sugar 152 mg.%.
64-22: 9-month-old male West Highland Terrier - "not peppy" since 3-months-old. Unable to climb stairs, unsure of footing on slick floors, urinates on grass. Occasionally fell with marked extension of hind limbs. Urinary incontinence. No history of systemic illness; vaccinated for distemper and hepatitis. No gross pathologic changes except this lesion (description not available) and Trichuriasis.

18430 - Scrub oak poisoning

I-119 - called type of pancreatitis, probably chronic
(should be called "pancreatic ductular ectasia" - Ferrall)
- Am. J. Path. 44: 973-981, 1964 (Junc.)

64-22 - Leucodystrophy,
- only 4 or 5 cases reported in dogs
- material PAS (+)

(10)

HISTORIES FOR WEDNESDAY SLIDE CONFERENCE
3 February 1965

- MI-9105: Mature cow slaughtered in good condition. Small pearl-like lesions scattered on peritoneal wall particularly concentrated in left pelvic area with larger hard lesions of the inguinal glands. Solid irregularly shaped mass about size of large egg in one horn of uterus. Small hard lumps of varying size throughout lungs. Pearl-like lesions noted on mesentery.
- 1151241: This yearling Hampshire ewe was one of a group of sheep kept in pens and fed on pellets of clover and alfalfa. Mineral blocks were available. Five sheep died over a period of several months. The interval between deaths was about 30 days. This animal, as were the others that died, was ~~at times~~, had rapid respiration and voided red urine.
- 13-65: 6-month-old male Siamese cat had eaten poorly Saturday evening and Sunday morning, but had played with the children. Was sick to its stomach Sunday and was found dead Monday morning. At necropsy the carcass was of a large cat in excellent condition. Hemorrhagic enteritis, white spots on the liver, and edematous mesenteric nodes were found. The owner stated that the cat had never been out of the house and denied having any poisons at home.

AI-9195 - Primary Adenocarcinoma Uterus

1151241 - Toxic Nephrosis - Cu⁺⁺ poisoning

13-65 - Feline Panlenkopenia - enteritis

HISTORIES FOR WEDNESDAY SLIDE CONFERENCE
3 March 1965

No. 57: Porcine - 150 pounds. Clinical observations: Yellow discoloration of sclera. Did not see terminal symptoms as died on weekend.

Postmortem: Heart - Petechia on both atria.

Stomach - Petechia and ecchymosis in pyloric region.

Visceral and Subcutaneous fat: icteric.

TRML-2620: Wild female rat trapped on TRML premises. Liver appears very nodular and contains a tape worm cyst (*Taenia taeniaeformis*). Kidney has a very roughened surface. Serum was positive for antibodies of Leptospira icterohemorrhagica.

1062334: 4-year-old male cat with malaise and moderate anorexia of 3-4 days duration. Mucous membranes pale. Sed. rate +4.
Packed cell volume: 13% RBC's

12% buffy coat

Progressive deterioration and death within 1 week of presentation despite heroic therapeutic efforts.

53 64-952 F₂

: Experimental Chimpanzee

54 MV-4F-86

Chimpanzee

A 4 yr old male German shepherd (trained sentry dog) was presented to the clinic for nose bleeding which started during a summer training session. The animal was treated and given rest for seven days; returned to training and completed the 11 months course without further complication. At the time of pre-departure physical examination, a satisfactory Knott's test was not obtained because the blood would clot in the 2% formalin solution. Having experienced this many times, for unknown reasons, no undue alarm was generated and a direct blood smear from the ear for microfilaria was done and found negative! Animal was shipped to a duty assignment but was returned to the sentry dog center 4 months later with a history of nose bleeding when worked. Complete clinical

examination and hematological studies were accomplished. Complete clinical examination and hematological studies were accomplished.

On auscultation, the heart sounds were muffled and dropped beats were noted. Radiographic views of the chest revealed an enlarged heart "shadow". The peripheral blood picture was within normal limits. Animal was later euthanized.

(S2)

P 259565 - Avian Encephalomyitis

(S3)

64452 F₂ - Anthrax - overwhelming infection, Chimp

(S4)

Mk 4F86

Cryptitis, chronic
- from dog with lymphosarcoma

(18)

HISTORIES FOR WEDNESDAY SLIDE CONFERENCE
17 March 1965

- 1129351: Chicken. Construct a history and give a diagnosis.
(53)
- 64P536: 20-month-old white face feedlot heifer, one of a group of 30 fat animals sent on July 15 to slaughter at Loveland, Colorado. No signs observed on ante-mortem inspection. On post-mortem inspection numerous grayish white foci (average size 3 mm) were observed in the muscles of the head, tongue and neck. Lesions were present only in the muscles, and this was the only animal in the group affected. Section is skeletal muscle from neck. (Only the head and attached neck muscles were submitted).
- 8141: Growth removed from the gum lateral to the last premolar of a five-year-old gelding.
(51)

1129351 - Infection Sanguostachetus
See Brester & Schwartz for
symptoms etc!

64 P 53 b - Eosinophilic myositis
Skeletal muscle

8141 - Squamous cell carcinoma

(B)

HISTORIES FOR WEDNESDAY SLIDE CONFERENCE
24 March 1965

TRML-2615:

(5)

German Shepherd, four-months-old, female, emaciated, severe pustular dermatitis and persistent diarrhea for two months, treated with Streptomycin, but with no results. Animal finally euthanized. Gross lesions were: (1) Pustular dermatitis, generalized; (2) Multiple whitish nodules, lung; and (3) Infarct, kidney.

AFIP #1155677:

(51-60)

Cow presented for necropsy in cachectic state; flanks were smeared with feces. Gross lesions were typical. Sections of intestine and mesenteric node presented.

Bovine:

(61)

Tissues from Bovine fetus aborted in 8th month of gestation.

Dam was not clinically ill. Cattle were part of a herd near the San Joaquin Valley in California. Other pregnant cows in the herd aborted when first removed from the area.

This fetus showed petechial in the oral and conjunctival mucous membranes and internal organs, edematous subcutis, and a coarsely nodular liver. There were small gray foci 5-10 mm in diameter in ventricles, adrenal cortices and other organs.

Histological lesions similar to these were seen in several different organs.

TRML-2615 - Coccidiosis, intestine, cowrie

1155677 - Jones disease, intestine and
mesenteric lymph node

Bovine - Bovine abortion, liver, bovine fetus

(19)

HISTORIES FOR WEDNESDAY SLIDE CONFERENCE
31 March 1965

FDA Path #33,465 - Mature, female beagle fed 1% FD&C color for several years.

(62) What pathology? Should color be allowed in human food?

If so, at what levels?

MI-9934 ————— Bovine, 4 years old, steer, good condition.

(66) History: Numerous nodules of white tissue throughout lungs.

No. # Monkey given 3500r at 350r/minute for 10 consecutive minutes.

(67) CNS signs seen 7 months later, including paraplegia. Are lesions compatible with radiation injury?

FDA 33465 - big controversy!

FDA diagnosis - chronic cystitis

A FIP " - polyp urinary bladder

possible diagnosis - chronic polyp
cystitis

MT-9934 - Adenoma of the lung
multicentric origin from mucous
glands of lung - all other organs
with mucous glands appeared to
be free of neoplastic changes

No #
⑥7 - Yes! Radiation Injury

(PA
JL)

Histories for Wednesday Slide Conference, 7 April 1965

134820—Mule serving in the Chinese army (1945). Biopsy of shoulder lesion.

(U) Clinically, appeared as prominent, corded lymphatics discharging a purulent material.

Ft. Knox—Surgical specimen, gum, African mustache monkey, Cercopithecus cebus, (no. #)

(U) female, 7-10 years old. Growth present 1½ years. Only such case seen in this monkey colony.

1071494—Condition occurring in small percentage of Sentry dogs, reported from

(U) Blytheville, Arkansas and San Antonio, Texas. Dogs showed excessive salivation, reddening and swelling of dorsum and sides of anterior one-third of tongue, pain while eating and drinking. Etiology?????

131820 - Epizootic lymphangitis - etiol. Histoplasma farciniosum

Diff'l diagnosis - 1. Ulcerative lymphangitis
etiol - Corynebacterium ovis

2. Mulerus - cutaneous form - "f
etiol - Mallomycetes mallei

3.

Ft. Knox - monkey - Gingival hyperplasia in the monkey
(63) Controversial diagnosis -

1071494 - Thermal burn -(sun burn?) of the tongue
features: degen^(hyptic), changes in lamina propria
Edema + separation of epith. from l.
Steaming of germinal layer nuclei

(21)

ADDRESS REPLY TO THE DIRECTOR
AFIP, WASH 20305 PG

RWT/frs

6 May 1965

Capt. John Ferrel
Pathology Division
Ft. Detrick, Maryland

Dear Captain Ferrel:

The diagnoses for the cases considered during the Wednesday Conference of 5 May 1965 follow:

31703 - Delayed healing in a midline laparotomy incision. Wound is approximately 3 weeks old. Hair and suture material are present. Young, female Beagle.

52-65-6 - Specimen of degenerating and regenerating skeletal muscle taken 6 days after muscle was crushed by forceps. Mouse.

64-269 - Meningitis and necrotizing myelitis apparently due to toxoplasma infection, 4-month-old female Boxer.

Sincerely,

Bob

ROBERT W. THOMASSEN
Captain, VC

Histories for Wednesday Slide Conference, 12 May 1965

VACA — Old cow, from Puerto Rico.

1136227 — Incidental finding in dog. What is the most likely etiology? (83)

P 714-65 — Twenty-six-week-old male turkey slaughtered at Oakland, Maryland. (84)

At postmortem inspection there was distinct pinhead-sized gray-white lesions scattered through the liver and enlarged spleen.

(23)

13 May 1965

Captain John F. Ferrel
Pathology Division
Ft. Detrick, Maryland

Dear Captain Ferrel:

Diagnoses for the cases considered during the Wednesday Conference of 12 May 1965 follow:

1136227 - Virus - Classification, lung, cow.

1136227 - Eosinophilic granulomatous lymphadenitis due to parasite, probably migrating nematode larva. Plasma cell hyperplasia, abdominal lymph node, camel.

P-714-65 - Centrilobular fatty change with minimal focal necrosis and infiltration of portal tracts by round cells. Apparent intranuclear inclusion in K-E cells of sinusoids, turkey. Case contributed by Bob Purrow - Veterinary Inspection. Etiology was undetermined in this and similar cases.

Sincerely,

Bob

ROBERT W. THOMASSEN
Captain, VC

(29)

Histories for Wednesday Slide Conference, 19 May 1965

(85) 1162709 - Twenty-five of 75 swine in Georgia with dermatitis and acariasis, several older ones had tumors. Treated with liberal amounts of old crankcase oil, latterly malathin, toxaphene, lindane were added to the oil. Condition present for about 1 year.

(81) 1771 — Feline. Section of tissue was collected from a domestic cat, one of five that was similarly infected. Most of the cats, including 1771, died shortly after arrival with panleukopenia. Name and location of parasite.

(87) No. # — Bovine. Microscopic finding "control" animal from a large herd in Southwest.

ARMED FORCES INSTITUTE OF PATHOLOGY

ADDRESS REPLY TO THE DIRECTOR
ATTN: MEDCOM — PG

(23) RWT/frs

20 May 1965

Capt. John F. Ferrel
Pathology Division
Fort Detrick, Maryland

Dear Captain Ferrel:

The diagnoses for the cases considered during the Wednesday Slide Conference of 19 May 1965 follow:

1771 — Chronic interstitial pancreatitis, cat, due to fluke Eurytrema procyonis. See Burrows and Lillis. J. of Parasitology, 46: 810-812, 1960.

1162709 — The consensus was that the cutaneous lesion in the swine was not neoplastic but primarily acanthotic. There was secondary reaction to keratin and bacteria.

1161468 — Granulomatous thyroiditis; bovine, due to actinobacillosis.

Sincerely,

B6

ROBERT W. THOMASSEN
